

The heatmap displays a 10x10 grid of colored squares. The colors represent values, with a gradient from dark purple (low) to bright yellow (high). The highest values (yellow) are located in the top-left corner, specifically in the first row, columns 4 and 5. The values decrease as they move away from this corner, with dark purple (low values) dominating the bottom-right corner, specifically in the last row, columns 6 through 10. The grid shows a clear diagonal trend of decreasing values from top-left to bottom-right.
