

The heatmap displays a 10x10 grid of colored squares. The colors represent values, with a gradient from dark purple (low) to yellow (high). The highest values (yellow) are located in the top-left quadrant, specifically in the first row, fourth column. The lowest values (dark purple) are concentrated in the bottom-right quadrant, particularly in the last two rows and columns. The grid shows a clear diagonal trend of decreasing values from top-left to bottom-right.
