

A 10x10 grid with a yellow background and a dark purple foreground shape. The foreground shape consists of a 1x1 square at (1,1), a 1x8 rectangle from (2,1) to (9,1), and a 1x10 rectangle from (1,2) to (10,2).

Heatmap visualization of the 'number' variable across 'category' bins. The y-axis represents 'number' (ranging from 12 to 21, inverted), and the x-axis represents 'category' (ranging from 1 to 9). The plot shows a dark blue background with lighter blue rectangular regions indicating higher values. The highest values (around 17-18) are concentrated in categories 2 and 5. Other notable peaks occur in categories 3 and 4.
